The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

10/087,576

Applicant(s)

MANGOLD ET AL.

Examiner

BEEMNET W. DADA

Art Unit

2135

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 29 November 2007.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-25 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-25 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

This office action is in reply to an amendment filed on November 29, 2007. Claims 1, 5, 8, 11, 14, 15, 20 and 25 have been amended. Claims 1-25 are pending.

Response to Arguments

Applicant's arguments filed November 29, 2007 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless —

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 20, 24 and 25 are rejected under 35 U.S.C. 102(e) as being anticipated by Kelly et al. US 2003/0050015 A1 (hereinafter Kelly).

As per claims 20, 24 and 25, Kelly teaches a method comprising:

transmitting a data structure to a consumption device [abstract and figure 5b], the data structure including,

a header [figure 5b, 525 & 527],

key information separate from and associated with the header for use in decryption [figure 5b, 537 and paragraphs 0069, 0094], and

Art Unit: 2135

a payload associated with the header, and separate from the key information, the payload capable of being encrypted using the key information [figure 5b, 545 and paragraphs 0069, 0094].

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Blatter et al US 5,878,135 (hereinafter Blatter) in view of Kelly et al. US 2003/0050015 A1 (hereinafter Kelly).

As per claim 1, Blatter teaches a method, comprising:

parsing a data stream to find a predefined synchronization point within the data stream (i.e., parsing packet data to find a **header**) [column 10, lines 17-30 and column 5, lines 47-50]; and

placing non-compliant data within the synchronization point in the data stream (i.e., inserting encryption codes near the header in the data stream) [column 5, lines 47-50 and column 10, lines 17-30]; wherein the data stream is decodable by a compliant decoder, after the non-compliant data is replaced with compliant data (i.e., after the encryption codes have been substituted with MPEG compatible data) [column 10, lines 1-7, 19-47]. Blatter is silent on placing non-compliant data separate from the synchronization point and a payload in the data stream. However, in the same field of endeavor, Kelly teaches placing non-compliant data (i.e., key information/key) separate from the synchronization point (i.e., header) and a payload in a

Art Unit: 2135

data stream [figure 5b, headers 525, 527, encryption key, 537 and payload 545 and paragraph 0094]. It would have been obvious to one having ordinary skill in the art at the time of applicant's invention to employ the teachings of Kelly within the system of Blatter to achieve the predictable result of separating a header and a payload from key-information / non-compliant data.

1 As per claim 5, Blatter teaches a method, comprising:

receiving a portion of a data stream and parsing the portion of the data stream to find a synchronization point within the data stream (i.e., parsing received data stream packet data to find a header) [column 10, lines 17-30 and column 5, lines 47-50];

retrieving non-compliant data within the synchronization point (i.e., retrieving encryption codes near the header) [column 10, lines 19-47]; and

replacing non-complaint data in the data stream (i.e., substituting encryption codes with MPEG compatible data) [column 10, lines 1-7, 19-47].

decrypting the portion of the data stream [column 13, lines 29-50]. Blatter is silent on placing non-compliant data separate from the synchronization point and a payload in the data stream. However, in the same field of endeavor, Kelly teaches placing non-compliant data (i.e., key information/key) separate from the synchronization point (i.e., header) and a payload in a data stream [figure 5b, headers 525, 527, encryption key, 537 and payload 545 and paragraph 0094]. It would have been obvious to one having ordinary skill in the art at the time of applicant's invention to employ the teachings of Kelly within the system of Blatter to achieve the predictable result of separating a header and a payload from key-information / non-compliant data.

As per claim 8, Blatter teaches a system, comprising:

Art Unit: 2135

an authoring device to use key information to encrypt a portion of a data stream [column 8, line 67-column 9, line 10]; and

a consumption device in communication with the authoring device, the consumption device to use the key information to decrypt the portion of the data stream and to replace the key information with compliant data [column 10, lines 1-7, 19-47 and column 13, lines 29-50]. Blatter is silent on placing key information separate from the synchronization point and a payload in the data stream. However, in the same field of endeavor, Kelly teaches placing key information (i.e., encryption key) separate from the synchronization point (i.e., header) and a payload in a data stream [figure 5b, headers 525, 527, encryption key, 537 and payload 545 and paragraph 0094]. It would have been obvious to one having ordinary skill in the art at the time of applicant's invention to employ the teachings of Kelly within the system of Blatter to achieve the predictable result of separating a header and a payload from key-information.

As per claim 11, Blatter teaches a system, comprising:

an authoring device to create a data stream [column 2, lines 49-53];

an encryption tool to embed key information near each synchronization point in the data stream and to encrypt a portion of the data stream associated with each synchronization point [column 5, lines 47-50 and column 10, lines 17-30]; and

a consumption device to retrieve key information within each synchronization point in the data stream and to replace the key information with compliant data and to use the key information to decrypt the data stream [column 10, lines 1-7, 19-47 and column 13, lines 29-50]. Blatter is silent on placing key information separate from the synchronization point and a payload in the data stream. However, in the same field of endeavor, Kelly teaches placing key information (i.e., encryption key) separate from the synchronization point (i.e., header) and a

Art Unit: 2135

payload in a data stream [figure 5b, headers 525, 527, encryption key, 537 and payload 545 and paragraph 0094]. It would have been obvious to one having ordinary skill in the art at the time of applicant's invention to employ the teachings of Kelly within the system of Blatter to achieve the predictable result of separating a header and a payload from key-information.

As per claim 14, Blatter teaches a machine-accessible medium having associated content capable of directing the machine to perform a method, the method comprising:

parsing a first data stream to find a packetized elementary stream (PES) header, the PES header associated with at least some payload data (i.e., parsing received data stream packet data to find a **header**) [column 10, lines 17-30 and column 5, lines 47-50];

copying the first data stream to a second data stream [column 12, line 60-column 13, line 21]; and

selectively inserting compliant data into the second data stream within the PES header, to hold key information associated with the PES header [column 10, lines 1-7, 19-47]. Blatter is silent on selectively inserting compliant data into the second data stream after the PES header and separate from a payload. However, in the same field of endeavor, Kelly teaches selectively inserting compliant data into the second data stream after the PES header and separate from a payload [figure 5b, headers 525, 527, encryption key, 537 and payload 545 and paragraph 0094]. It would have been obvious to one having ordinary skill in the art at the time of applicant's invention to employ the teachings of Kelly within the system of Blatter to achieve the predictable result of separating a header and a payload from key-information.

As per claims 2-4, 6 and 7, Blatter further teaches the method further comprising encrypting/decrypting a portion of the data stream and transmitting the portion of the data

Art Unit: 2135

stream and wherein the non-compliant data is key information that is used in encrypting and decrypting [column 8, line 67-column 9, line 10].

As per claim 9 and 10, Blatter further teaches the method further comprising a decoding device in communication with the consumption device to decode the portion of the data stream and wherein the consumption device is configured to retrieve the key information from the portion of the data stream [column 13, lines 25-57].

As per claim 12 and 13, Blatter further teaches the method further comprising a decoding device in communication with the consumption device to decode the portion of the data stream and wherein the consumption device is configured to retrieve the key information from the portion of the data stream [column 13, lines 25-57].

As per claims 15-19, Blatter further teaches the medium wherein the method further comprising parsing a data stream to find a predefined synchronization point within the data stream (i.e., parsing packet data to find a **header**) [column 10, lines 17-30 and column 5, lines 47-50]; and placing key information near the synchronization point in the data stream (i.e., inserting encryption codes near the header in the data stream) [column 5, lines 47-50 and column 10, lines 17-30]; wherein the data stream is decodable by a compliant decoder, after the key information is replaced with compliant data (i.e., after the encryption codes have been substituted with MPEG compatible data) [column 10, lines 1-7, 19-47].

Claims 21-23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kelly US 2003/0050015 A1 in view of Blatter et al US 5,878,135.

As per claims 21-23, Kelly teaches the method as indicated above. Kelly is silent on the system, wherein compliant data replaces key information associated with the header before decryption. However, within the same field of endeavor, Blatter teaches replacing non-complaint data in the data stream (i.e., substituting encryption codes with MPEG compatible data) [column 10, lines 1-7, 19-47] and decrypting the portion of the data stream [column 13, lines 29-50]. It would have been obvious to one having ordinary skill in the art at the time of applicant's invention to employ the teachings of Blatter within the system of Kelly in order to provide efficient processing of data.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to BEEMNET W. DADA whose telephone number is (571)272-3847. The examiner can normally be reached on Monday - Friday (9:00 am - 5:30 pm).

Art Unit: 2135

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kim Y. Vu can be reached on (571) 272-3859. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
